

Installing and displaying your Religious Images backlit scene is easier than ever with our rolling track installation method!

Use of a roller system makes moving your image, back and

forth in front of your baptistery opening a breeze

Religious Images is pleased to offer an alternative to building a shadow box for displaying your backlit scene. The use of a track and roller system give you the freedom to move your image easily from left to right or from front to back, depending on how you want it displayed. The image is held in a simple frame (constructed with 2x4's) with moulding. The rollers attach directly to your frame at the top and slide back and forth over the track. To light scenes displayed in this manner, simply shine spotlights on them from behind. Religious Images is proud to now offer the rolling track materials to its customers.

With Religious Images roller system, it is a snap to move your backlit scene from side to side and out of the way if you need to use your baptistery.
